

HPC terminology

by

Stefanos, Vlado, Daniel & Michal

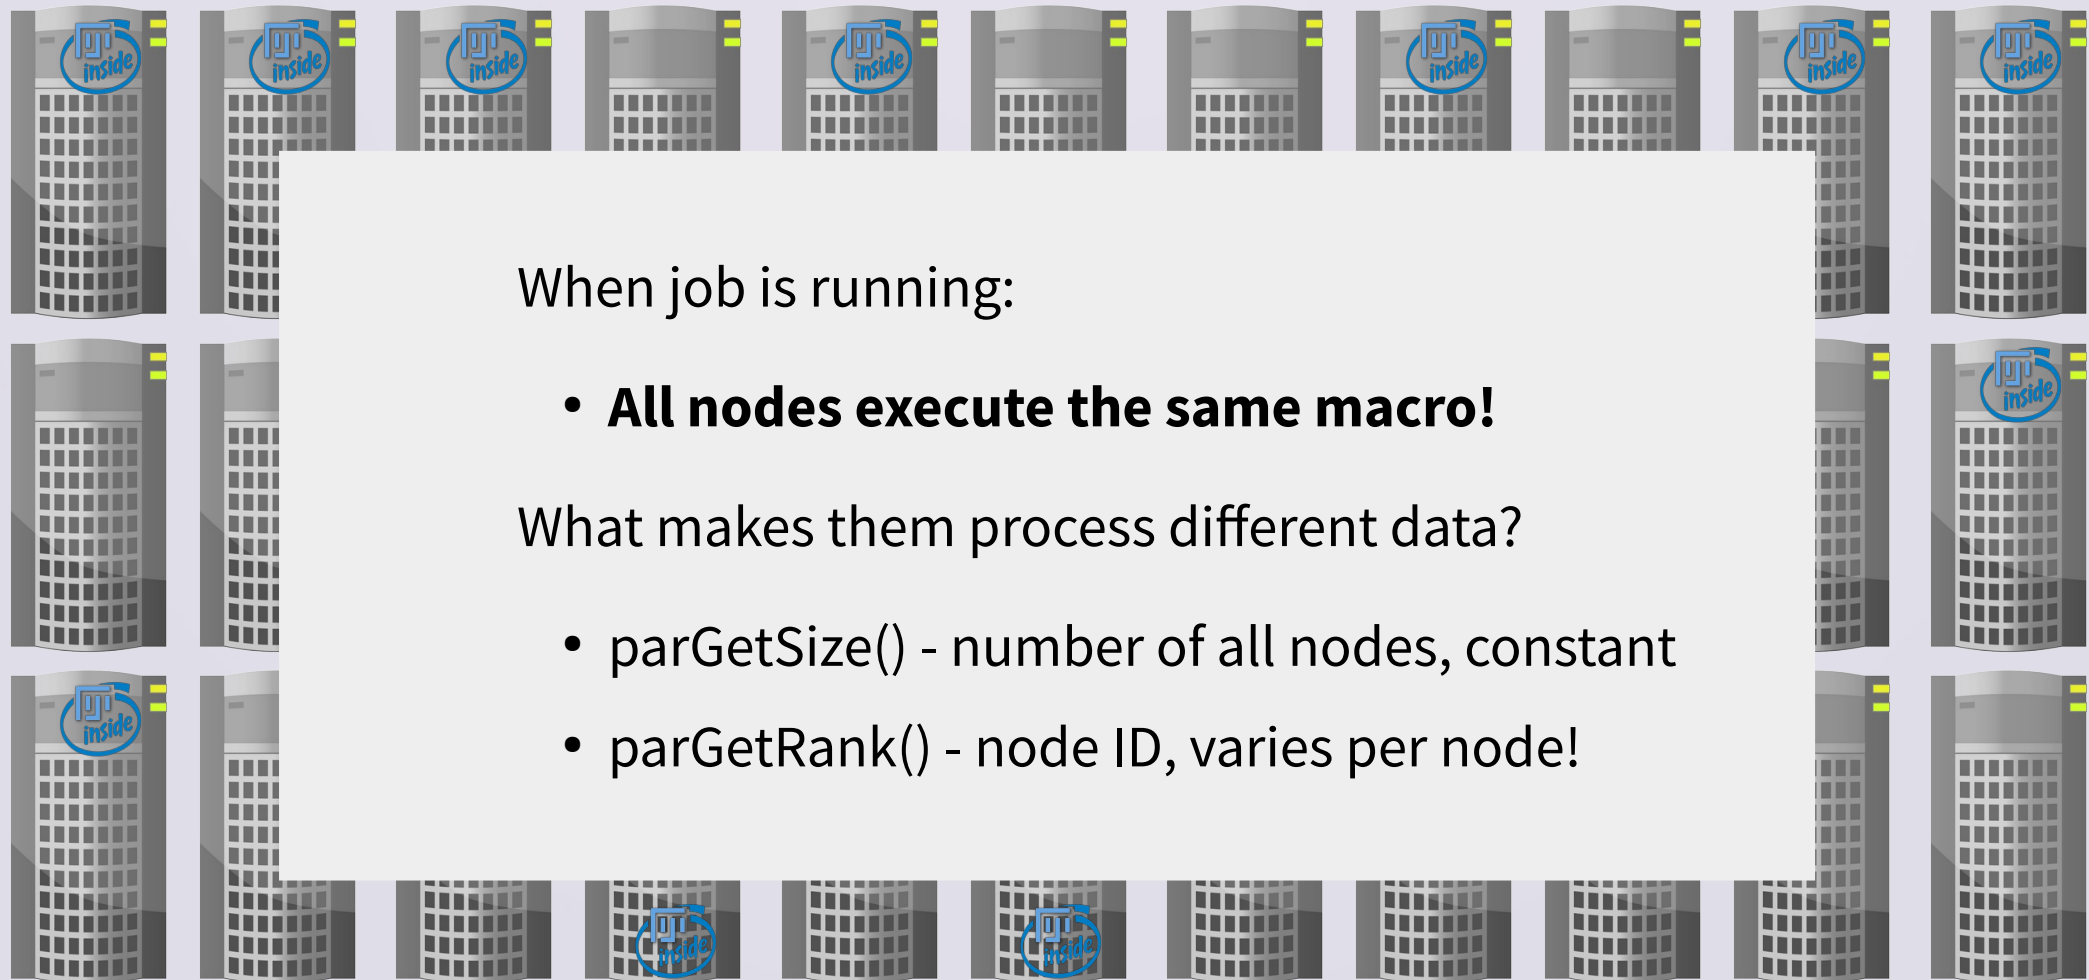

Grand scheme of things

High Performance Computing Center (HPC) – job is running on some nodes

Grand scheme of things

High Performance Computing Center (HPC) – job is running on some nodes

When job is running:

- **All nodes execute the same macro!**

What makes them process different data?

- `parGetSize()` - number of all nodes, constant
- `parGetRank()` - node ID, varies per node!
